

Built for Independents

Atlas PM, by Iron-IQ, helps independent oil and gas operators own their measurement data, validate volumes and allocations, and maintain audit-ready records. No enterprise complexity. No rip-and-replace required.

THE PROBLEM

Small producers carry the same royalty and reporting obligations as large operators, but without dedicated measurement teams or enterprise validation systems. A persistent 1% measurement or allocation error on a 250 bbl/d oil operation can quietly cost \$68,000/year. On gas, a 4,500 Mcf/d stream with a 1% error at \$3.25/Mcf means \$53,000/year in lost revenue. These losses compound when audit trails are missing and disputes arise.

WHAT ATLAS PM DELIVERS

Managed Measurement Collection

Iron-IQ's proprietary polling engine retrieves real-time data, historical EFM files, alarms, events, and configurations from 30+ field device protocols. No polling system to operate.

Measurement Validation

AGA and API compliant gas and liquids validation with a virtual flow computer, full audit trail, missing data detection, and settlement-ready outputs.

Audit-Ready Record Keeping

Secure, traceable record storage with complete data history. Defensible documentation for ONRR reporting, royalty disputes, and regulatory audits.

Compliance Reporting

QTR reports, compliance reports, balance reports, and BLI eports generated directly from validated data. No mor spreadsheet patchwork.

WHY INDEPENDENTS CHOOSE ATLAS PM

No rip-and-replace. Works alongside your existing SCADA and field devices.

Own your audit trail. Verify settlement statements independently

Subscription pricing. No capital outlay. Pay only for what you use.

Zero IT burden. Iron-IQ manages all infrastructure, cybersecurity, and updates.

See Atlas PM in 30 minutes.
